Location: Bloomington, MN

**Keyback Design**
To enhance in-place installation, Endicott thin brick feature a keyback design, which provides a mechanical lock into the concrete for maximum durability and permanence.

It also provides advantages of increased shear values and pull-out strengths.
**SWFA Outdoors**

Location: Villanova, PA
PAVER SPACERS

Paver Spacers used in a Herringbone application

Paver Spacers used in a Running Bond application

Paver Spacers used in a Basketweave application

ELIMINATING CHIPPAGE
In segmental paving applications, chippage often occurs when pavers move against each other due to improper installation techniques. Endicott paver spacers, however, eliminate this issue. They create and ensure the needed spacing between units to accommodate jointing sand while providing the crisp appearance of square edge pavers.

In 1920, rich mineral deposits were discovered in Jefferson County, Nebraska. These rich minerals form the clay that gives Endicott's product collection its natural beauty and unmatched color palette. Across North America, Endicott's collection of face brick, thin brick, pavers, tile and special shapes are setting the solid world in motion.
