Window Jamb & Head Detail

Using Standard Chamfer and Norman Chamfer

Radial Brick

Sizes are in inches. Not all sizes shown are available as stocking products, additional production time should be taken into account. Consult your Sales Rep. for scheduling.

Radial brick are used when a radius is too small to produce an acceptable smooth surface with stretchers. This may be accomplished in some cases by the use of halves or headers at the radius areas. Standard stretchers can turn a 5'-0" radius and Norman stretchers can turn a 8'-0" radius quite nicely.

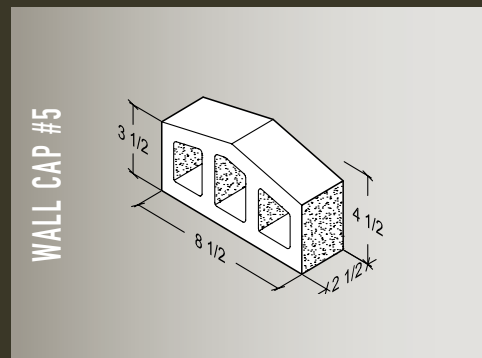

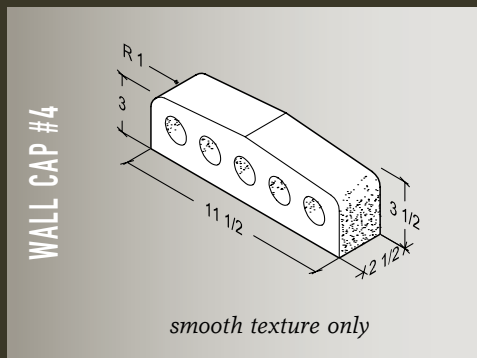

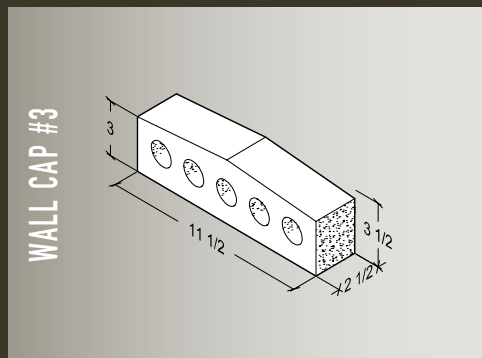

Mutual Materials can manufacture smooth standard inside and outside radial brick with a minimum 1'-6" radius and a maximum 12'-0" radius (18'-0" for Normans). Norman and standard outside radial brick can be produced with a mission texture in virtually any radius.

The length "x" of a radial brick is determined by the arc of the circumference. It is important to know if one is dealing with a full circle, half, etc. The length "x" can be no longer than the basic unit of the wall.

Starter units must be used unless the arc is a full circle or the arc is butting another wall.

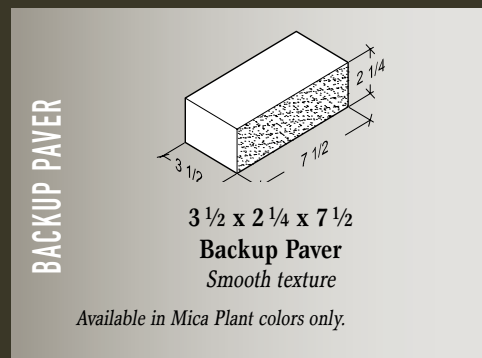

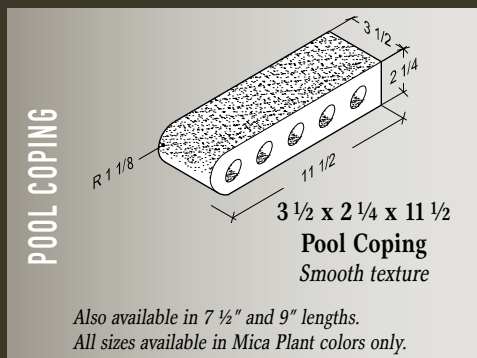

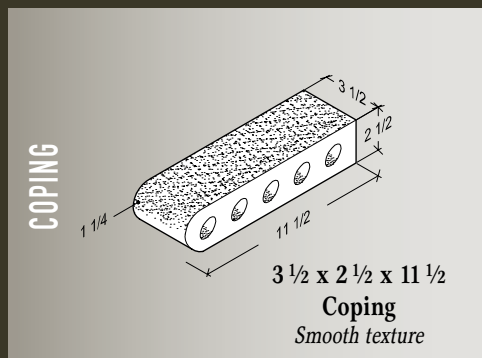

Wall Caps

Sizes are in inches. Not all sizes shown are available as stocking products, additional production time should be taken into account. Consult your Sales Rep. for scheduling.

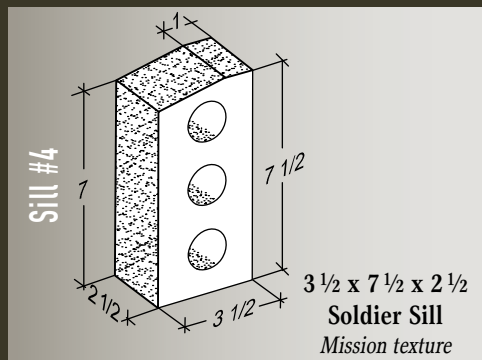

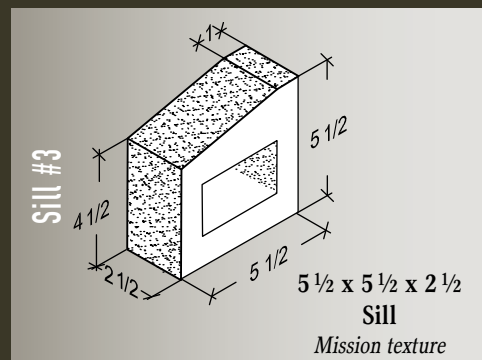

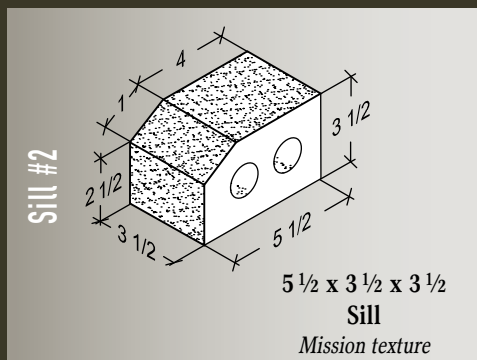

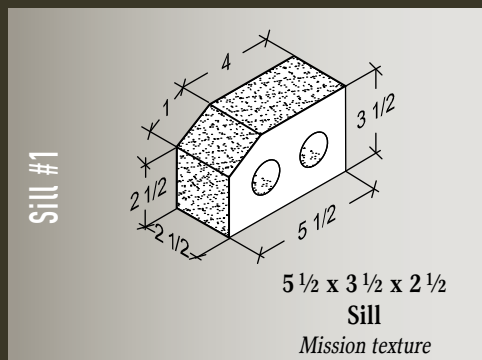

Coping Brick

Sizes are in inches. Not all sizes shown are available as stocking products, additional production time should be taken into account. Consult your Sales Rep. for scheduling.
